Senior Software Engineer

Senior Frontend Engineer with over 10 years of expertise in developing high-performance, user-centric web applications. Specializing in React, TypeScript, Node.js, CSS, and modern frontend technologies. I excel in designing scalable, maintainable systems that enhance user experiences. I am passionate about working with cross-functional teams to create products that foster innovation and empower users. Seeking to leverage expertise in front-end development to drive innovation and deliver exceptional products.

WORK EXPERIENCE

Senior Frontend Engineer • Portland, OR • Full-time
Roboboogie • 09/2015 - 03/2024

- Owned end-to-end development for projects, from technical design to implementation and launch
- Led cross-functional development teams to design and deliver high-impact web experiences, driving key UX optimizations and improving user satisfaction using technologies like Node.js, and React.
- Collaborated with designers and engineers to build responsive, accessible, and high-performance applications, ensuring adherence to WCAG standards.
- Regularly interacted with clients for support, sales, and troubleshooting. Maintained strong client relationships.
- Regularly mentored junior developers and contributed to fostering a collaborative, knowledge-sharing environment.
- Integrated both first and third-party APIs for new product features for clients in healthcare and e-commerce.
- Developed a CLI tool for faster production with Optimizely X, available on NPM and GitHub. Led to a savings of 15-20% in time spent on test production using Optimizely.
- Spearheaded efforts in debugging and optimizing legacy code, addressing tech debt while implementing new features.
- Implemented performance optimizations and A/B tests that improved user engagement and contributed to revenue growth.

Frontend Engineer • San Francisco, CA • Full-time
Thismoment Inc • 12/2013 - 06/2015

- Promoted to co-lead the frontend development team, responsible for delivering well-built and performant products for Fortune 500 clients.

- Developed responsive, accessible web applications with a focus on high-impact user experiences, collaborating with designers and backend engineers to ensure seamless integrations and feature implementations.
- Developed reusable, configurable, and responsive components for use in our CMS (Twitter feed & Video Gallery). Utilizing both outside APIs and creating internal request/response APIs to handle user configuration.
- Integrated third-party API services to add new functionalities to websites; including user contest upload submissions.
- Conducted technical interviews and participated in hiring decisions for multiple roles including front-end and IT.
- Created extensive documentation for internal CMS systems, improving development workflows and onboarding for new engineers.
